

Agilent N2X at Supercomm 2005

Booth # 32015

N2X @ Metro Ethernet Forum (Booth # 48085)

The Metro Ethernet Forum will host the first demonstration of Carrier Ethernet services during SuperComm 2005. This will be the world's largest interoperability demonstration with over 30 members participating. Agilent's N2X Multi-Services Test Solution will demonstrate MEF Traffic Management Fundamentals, World First MEF 9 UNI Conformance Test and Validate Ethernet Services from 10Mb/s to 10Gb/s.

N2X Industry Leading Solutions

You can also see N2X will in action on the following booths at Supercomm 2005

Cisco Systems Booth # 71037

Juniper Networks Booth # 41058

Mangrove Systems Inc Booth # 42046

Laurel Networks Booth # 34054

BATM Booth # 24048

Multiservices Test Solution for Triple-Play

The Agilent N2X multiservices test solution provides the industry's most comprehensive capability for validating performance and scalability characteristics of next-generation network equipment used to deliver triple-play services.

Network equipment manufacturers and service providers can now cost-effectively and rapidly emulate real-world usage scenarios. New emulation software, focused built applications and industry-leading hardware test cards enable testers to develop unique insight into the QoE of each individual subscriber's service while the network is fully loaded with traffic.

This allows the testing of new network architectures and elements in ways that closely resemble the end-user's triple-play service experience.

Testing Triple play networks live in action at Supercomm

Come to the Agilent Technologies Booth #32015 to see comprehensive testing of triple-play networks with Agilent N2X and companion test solutions.

Demonstrations include:

- N2X Triple Play – IPTV Channel Zapping, High Availability, Multicast Scalability, Simultaneous QoE/QoS
- N2X Productivity Advantage – Automation Test Tools, MEF 9 Conformance, IPv6/v4 Routing Conformance
- N2X 40G Testing – Traffic and QoS Scalability, IPv6 Routing and Traffic
- NetworkTester – Triple Play Security Performance, Realistic Application Traffic Mixing
